

ACU SUICIDE SAFER CARE FEE SCHEDULE & TRAINING DESCRIPTIONS

FEE SCHEDULE

These fees are applicable to all health centers and primary care associations.

Event Type	Member Rate	Non-Member Rate
In-Person One-Hour Suicide Safer Care Training	\$1,800 <i>Plus travel expenses</i>	\$2,500 <i>Plus travel expenses</i>
Virtual One-Hour Suicide Safer Care Training	\$1,250	\$1,500

[ACU Members](#) receive significant discounts. More in-depth trainings and technical assistance are available. Please contact [Rick Brown](#), Associate Director of Communications and Membership, for further details.

CORE TRAINING DESCRIPTIONS

The following summaries outline key “core” trainings in ACU’s Suicide Safer Care program. Further tailored training and technical assistance is available. [Contact us](#) for details.

Suicide Safer Care for Primary Care Providers and Their Teams

This training will provide a comprehensive approach to the identification and management of patients at risk for suicide in a primary care setting and within the course of a routine primary care visit. Participants will learn the role primary care can play in suicide prevention, risk assessments, lethal means restriction and safety planning. This training is strongly recommended for all medical leadership, primary care providers and their teams.

Suicide: Considerations for Health Center Leaders

Community health center leaders need to think about the role they play in their community to help suicide prevention efforts and to communicate that suicides are preventable. Health center leaders need to consider strong clinical pathways to care for patients at risk, support for employees, and human resources to address suicide risk among staff as suicide among healthcare providers is a rising problem. Participants will learn about the prevalence of suicide and ways their health center can be proactive in creating a system that supports patients and team members who are at risk for suicide.

Pediatric Suicide Prevention for Primary Care Providers: A Suicide Safer Care Approach

The crisis of pediatric suicide in the United States is growing. Suicide is the second leading cause of death in youths aged 10-24, with the fastest-growing rates among youth ages 10-14. Additionally, the crisis is marked by significant racial disparities. However, primary care providers at health centers and other organizations have a crucial opportunity to intervene. This training provides an overview of the crisis and why providers can play an important role in prevention, discussed common warning signs and risk factors, and detailed effective pediatric suicide prevention practices include screening tools such as the PHQ-A and ASQ, as well as clinical pathways and evidence-based interventions.

Suicide Safer Care for Behavioral Health Providers in Primary Care Settings

This webinar will provide specific training and information geared for behavioral health providers practicing in primary care settings. Many behavioral health providers have never received training on how to identify, assess and care for patients at risk for suicide as part of their professional training. This training will focus on evidence-based interventions and techniques for assessing risk, restricting access to lethal means and safety planning. Suicide rates are increasing in communities across the country and the ability for behavioral health providers to care for them will help in reducing stress among behavioral health providers and reducing suicide rates overall.
